

Operations that scales with you.

So growth works for you.

Turning scattered tools and data into one clean system that holds as you grow. Operations experience from high-growth companies, built for teams that already run on software.

Built for speed, not to last

Ten tools, no system

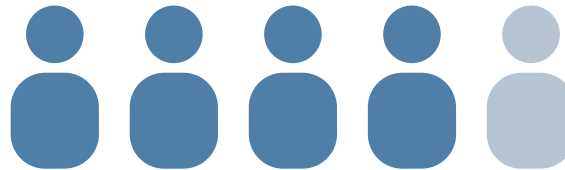

Asana, Monday, Slack, Sheets, Excel, all bolted on over time. Every workflow runs on someone copying between them by hand.

No single source of truth

The same number reads three ways in three tools. Knowing which one to trust takes real work.

Built on founder knowledge

How things actually run lives in a few heads and early workarounds that never scaled. Quiet tech debt that costs time daily.

Studies suggest the average employee spends around 1.8 hours a day just looking for information, often because the tools don't talk to each other. Out of every five people, four create value and one is searching. (McKinsey)

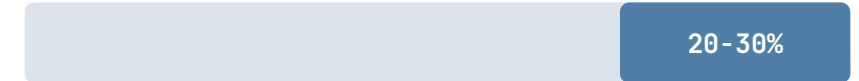

What the gaps cost

- Cash sits in the wrong inventory because forecasting runs on gut feel, not data.
- Strong people burn hours on copy-paste and status updates instead of decisions.
- Three people keep the same record in three systems, when one clean source would serve them all.
- Every manual handoff between tools is one more place things break.
- Every new tool adds friction and quietly slows the team down.

It compounds. Usually exactly where no one is looking.

ANNUAL REVENUE

LOST

Market researcher IDC estimates companies lose 20 to 30% of revenue each year to inefficient processes.

15 to 20% of the data in a typical company is duplicated (Experian). Spread across tools, that only grows.

Modular sprints, each one self-contained

No need to commit to one big package. You start with a single sprint, and each one leaves you with something finished and running.

Setup audit

Your tools and data mapped, the real breaks named, a clear path forward.

READY TO RUN

Connect & streamline

Forecasting, inventory, purchasing and reporting wired into clean flows from one source.

READY TO RUN

Custom tool

Where off-the-shelf falls short, a tool built to fit, handed over ready to run.

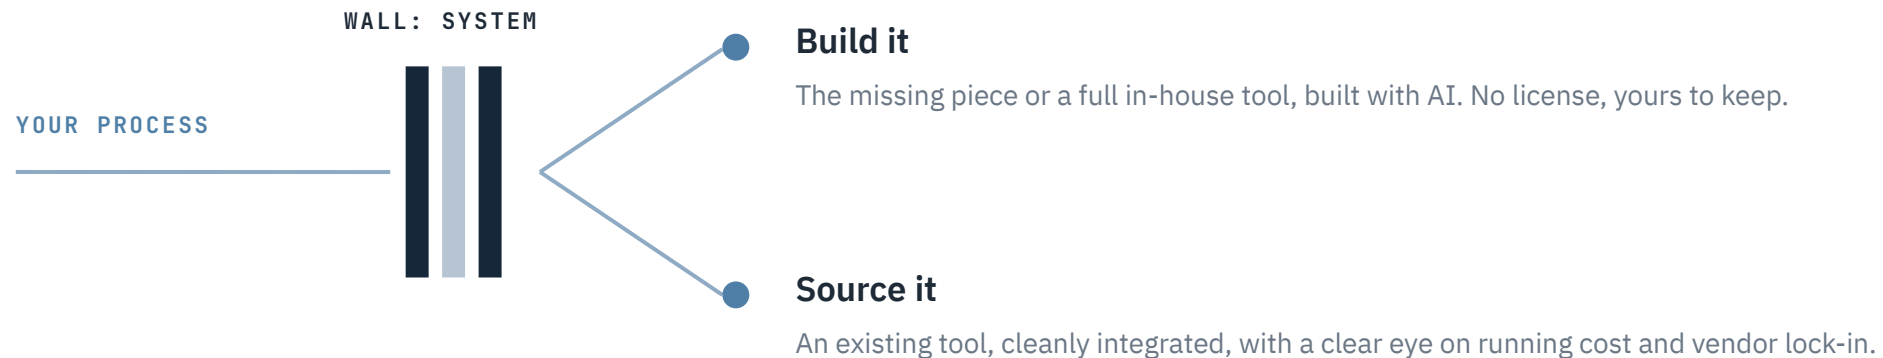

READY TO RUN

You set the scope. After each sprint you decide: keep going or stop here.

And when a sprint runs into the limits of your current systems?

Systems are not a dead end

When a sprint hits the limits of your current tools, we build or source what is missing. That, too, ships ready to run.

Either way it runs on your side and it belongs to you.

EXAMPLE

A local AI that holds your company knowledge in one place. Runs on your own hardware, stays compliant, and answers for anyone on the team, anytime.

What enterprises build is now within reach

Out of reach until now

A real integration layer and data platform meant a long project and a dedicated team. For most companies, too slow and too costly.

AI is the lever

What used to take a full team and months, one person now ships with AI, fast and in a clear scope.

The window is open

Set it up clean early and you scale without the tool sprawl others spend years untangling.

SOFTWARE IS NO LONGER THE BOTTLENECK

Until now teams bend to fit their tools. Now lean systems get built around how you actually work.

Put AI to work without handing over your data

A contract first

A data processing agreement under Art. 28 GDPR, signed before I touch any real data.

As little data as it takes

Wherever possible I work on anonymized or test data. Real data only where it is truly needed.

Nothing leaks to outside models

No personal data ends up exposed in external AI. Processing stays local or under contract.

Encrypted devices, secure access, clear documentation.

Learned on the floor, not in a seminar

Years inside fast-growing, often messy companies, fixing things while the business kept running. That builds an eye for quick wins and for the breaks that look the same in every stack.

+55%

structural forecast bias surfaced and made fixable

174k EUR

in overdue purchase orders brought to light for the first time

6 weeks

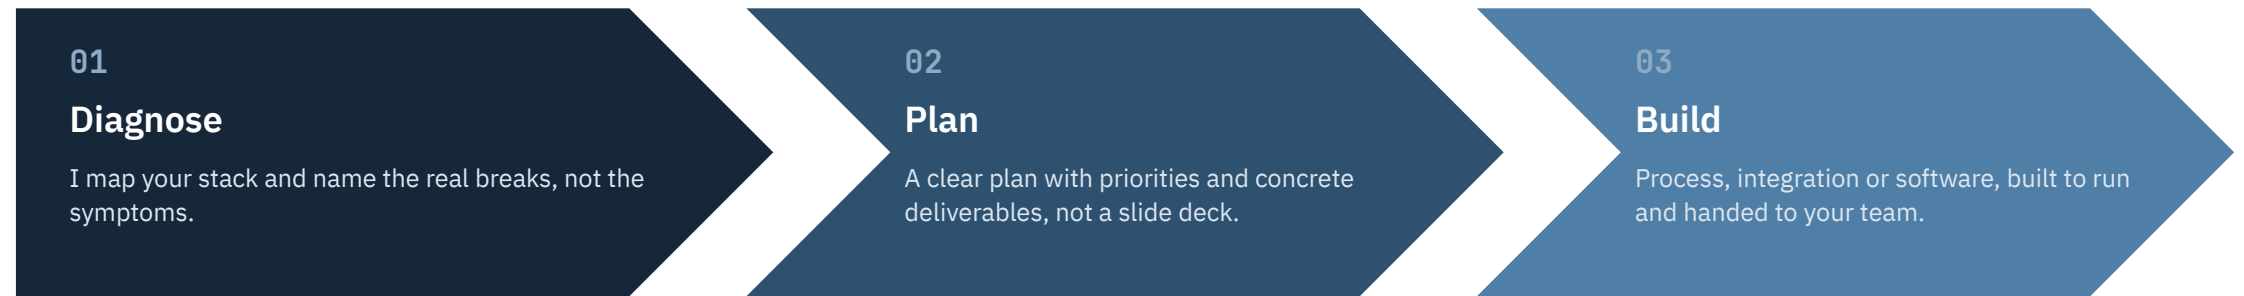

from scattered tools to a working forecast and cockpit

25-30%

less headcount at the same output through custom tools

Track record: Gorillas/Getir (q-commerce hypergrowth) · Unybrands (global e-commerce aggregator) · DTC transformation mandate

Three steps to a result that runs

Fixed scope, fixed price. Every stage ends with something that works, no waiting until the end.

Let's talk.
